

Z-BOX

Everything Under Control

Designed to withstand everything.
Made of 2mm stainless steel and with an octagonal design, the Z-Box is the ideal all-terrain solution for the most demanding environments.

An elegant, functional, and durable element, built to last.

SOLUTION WITHOUT EDGES
ALWAYS READY TO FACE ANY CHALLENGE

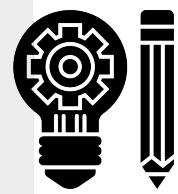

Robustness and Durability

Made of austenitic stainless steel and blasted with glass beads or powder-coated, the Z-Box is designed to stand up to the test of time without compromise.

Its octagonal structure withstands the harshest environments; rain, irrigation, and heavy vertical and horizontal loads, ensuring flawless performance in any setting.

Furthermore, its maintenance couldn't be easier: a simple cloth restores its original finish.

It is the ultimate solution for the most demanding challenges.

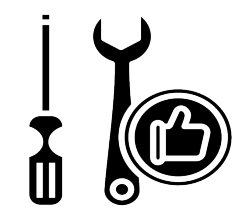

Functionality and design in Perfect harmony

The octagonal design of the Z-Box provides security, rigidity, and an aesthetic that adapts to any environment.

Its assembly is quick and efficient, with a 270° opening to facilitate access even in tight spaces.

Optionally, it can incorporate LED lighting and the GZ-Box system for box control and unattended certification of the wiring.

Easy to assemble and accessible

Designed by and for technicians, the Z-Box ensures a safe and efficient installation. Its wall mounting from the rear cover eliminates unnecessary protrusions and improves access to the wiring.

Available in 9.5" or 19" formats and in 5U or 6U heights, it can also be customized for bespoke projects through our design and production area, ensuring tailored solutions.

Its modular structure allows for the integration of accessories and specific configurations, optimizing each installation according to the environment and customer requirements.
